

DEPLOYMENT

Deployment with Netlify

To make our project live and accessible to everyone, we chose Netlify as our hosting platform. Netlify offers a simple and efficient way to deploy front-end projects directly from GitHub, ensuring a smooth and automated deployment process.

Website Url

Steps We Followed:

Connected Repository:

Linked our GitHub repository to Netlify for continuous deployment.

Build & Deployment:

Selected the appropriate branch and deployed the project with a single click.

Live Website:

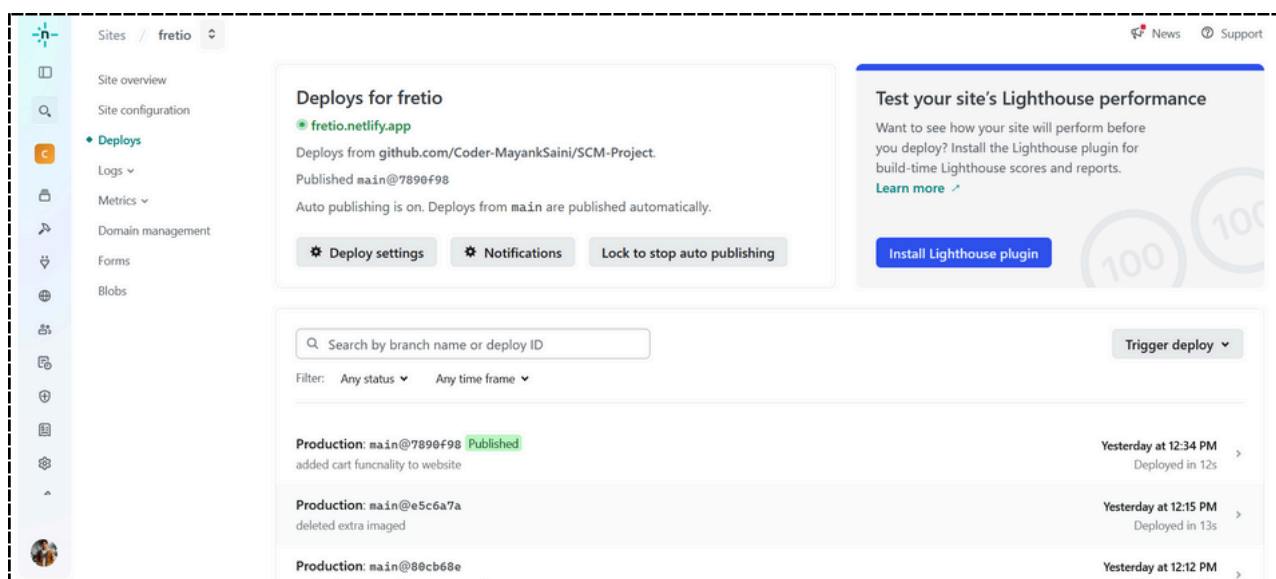

After deployment, Netlify generated a unique URL, making our platform live and accessible for testing and feedback.

Automatic Updates:

Any changes pushed to GitHub automatically update the live website, ensuring the latest version is always accessible.
